THE CONTROL YOU WANT

- ✓ **Real-time transaction reporting** – data as activity happens, not an end-of-day batch.
- ✓ **Vault cash forecasting** – plan loads around real demand, not a fixed schedule.
- ✓ **Automated report delivery** – the summaries you need, on your schedule.
- ✓ **Instant terminal creation** – add TIDs yourself, with no provisioning queue.
- ✓ **Terminal error alerts** – faults surface the moment they happen.
- ✓ **User access control** – you control what each person is allowed to see.

MOBILETMS – EVERY FEATURE, IN YOUR POCKET

Full desktop parity on mobile. Available in your app store.

QUESTIONS, ANSWERED

Who on my team can access TMS?

You control it. Access and permissions are managed inside TMS, so each person sees only the terminals and functions you assign.

How current is the transaction data?

Real time. Reporting and cash balances update as activity happens rather than in an end-of-day batch.

How do I find out about a terminal problem?

Terminal error alerts surface faults as they occur, and automated report delivery puts summaries in your inbox on your schedule.

Is the mobile app a stripped-down version?

No. MobileTMS gives you the same features as the desktop platform, so you can manage your portfolio from anywhere.

Can I add terminals myself?

Yes. Create new terminal IDs instantly from within TMS – no support ticket, no waiting on a provisioning queue.

Does TMS help reduce armored car costs?

Vault cash forecasting lets you anticipate load requirements, so cash deliveries follow real demand instead of a fixed schedule.
